The Professional Responsibility Case for Valid and Nondiscriminatory Bar Exams

Joan W. Howarth
The Professional Responsibility Case for Valid and Nondiscriminatory Bar Exams

JOAN W. HOWARTH∗

ABSTRACT

Title VII protects against workplace discrimination in part through the scrutiny of employment tests whose results differ based on race, gender, or ethnicity. Such tests are said to have a disparate impact, and their use is illegal unless their validity can be established. Validity means that the test is job-related and measures what it purports to measure. Further, under Title VII, even a valid employment test with a disparate impact could be struck down if less discriminatory alternatives exist.

Licensing tests, including bar exams, have been found to be outside these Title VII protections. But the nondiscrimination values that animate Title VII disparate impact analysis for employers apply just as fundamentally to attorney licensing through principles of professional responsibility and legal ethics.

This Article examines the civil rights cases from the 1970s that established bar examiners’ immunity from Title VII. It then analyzes our professional duties of public protection, competence, and nondiscrimination that require valid, nondiscriminatory attorney licensing tests, suggesting that the Title VII framework be borrowed for this purpose. The Article then undertakes that scrutiny, presenting evidence of the disparate impact of bar exams and their unproven validity, and suggesting feasible, less discriminatory modifications and alternatives. In other words, core professional responsibilities require consideration and adoption of valid licensing mechanisms that can reduce any disparate impact in who we permit to enter our profession, and who we exclude.

INTRODUCTION

Valid and nondiscriminatory attorney licensing mechanisms are crucial for the legal profession and the public we serve. Valid bar exams test knowledge and skills important for competence as an attorney. Nondiscriminatory licensing is necessary to ensure fairness in entry to the profession. Yet serious criticism of bar exams on both grounds—questionable validity and racially disproportionate impact—is widespread and persistent. Principles of professional responsibility require us to address these enduring problems. Understanding why these issues exist helps to identify a meaningful solution.

Some argue that licensing tests play a protectionist, exclusionary role as an effective barrier to entry at the expense of their public protection functions of assessing competency in nondiscriminatory ways.\(^1\) Lawyers justify self-regulation because of our special role as officers of the court and defenders of the rule of law,\(^2\) but the profession is not immune from capture by self-interest, favoring protecting the profession over protecting the public.\(^3\)

Another explanation for the persistence of such serious flaws in bar exams is that attorney licensing as public policy is not well-studied, either within or beyond the world of examiners. Led by the National Conference of Bar Examiners (“NCBE”), licensers have developed test design and psychometric expertise to improve the quality of the questions and the reliability of the scores,\(^4\) both fundamentally important. But bar examiners have not been as ambitious or successful addressing the harder questions of aligning licensing to the competencies required for minimal competence in today’s profession.\(^5\)

Academic attention has also been minimal. Labor and employment law scholars do not focus on licensing issues, and licensing is often neglected when regulation of attorneys is considered.\(^6\) Statements about and study of

professional responsibility and legal ethics have traditionally focused more on the responsibilities of the individual attorney to the client than on the obligations of the profession. A growing army of academic support professors work to prepare students to pass bar exams, but very few law professors study or write about attorney licensing practices as public policy. And, of course, most members of the profession are happy to forget about bar exams once they have jumped that hurdle, except, perhaps, to agree that the barrier remains high for those who follow.

The most powerful explanation for persistent weaknesses related to disparate impact and validity of attorney licensing may be bar examiners’ immunity from Title VII, which can be traced to a handful of cases from the 1970s. In the decades since, Title VII has remade the workplace by requiring countless employers to throw out discriminatory tests that are not sufficiently job-related. But the continuing authority of federal appellate decisions that dismissed challenges by African Americans to bar exams in Southern states has meant that bar examiners—and other professional licensing entities—have enjoyed decades of freedom from litigation pressure related to validity and disparate impact problems.

Those early cases in which judges declared bar examiners immune from Title VII were based in part on the lofty rhetoric of law as a profession dedicated to public protection. Despite a record showing striking racial disparities in bar pass rates, questionable validity, and problematic scoring practices, bar examiners successfully defeated the challenges by asserting their own good faith and wrapping themselves in the aura of public protection. Whether or not Title VII reaches licensers, the same scrutiny currently required of employers under Title VII can and should be imposed

on bar examiners pursuant to core principles of professional responsibility. Two roads lead to the same destination.

This Article proceeds in four parts. Parts I and II describe how we got to our current problematic position. Part I explains the well-established Title VII doctrine that limits the use of discriminatory tests by employers, unions, and employment agencies. Part II describes the decisions by which bar examiners became immunized from those Title VII requirements. Those cases included important but unsuccessful civil rights claims that tell compelling stories about a history of disparate impact, questionable validity, and indefensible scoring of bar exams.

Part III argues that even if Title VII does not control, the professional responsibility obligations of public responsibility, competence, and nondiscrimination require valid, nondiscriminatory attorney licensing tests, and that the three-step process of Title VII should be the blueprint for licensing scrutiny. In other words, existing ethical principles and professional responsibilities require bar examiners and courts to eliminate racial and ethnic disparities in licensing tests that are not affirmatively shown to be sufficiently job-related or that can be prevented by reasonable alternative licensing mechanisms.

Part IV then applies those professional responsibility obligations to scrutinize the licensing process. This Part first describes the disparate impact of bar exams. Then it analyzes the difficulties in establishing job-relatedness of bar exams. Finally, it explores potentially valid alternatives with less discriminatory impact.

Lastly, the Conclusion reflects on our profession’s willingness to take seriously our professed values.

PART I: TITLE VII STRIKES DOWN EMPLOYMENT TESTS THAT COMBINE DISPARATE IMPACT WITH INSUFFICIENT VALIDITY OR JOB-RELATEDNESS

Since the landmark 1971 Supreme Court case Griggs v. Duke Power Company, Title VII of the 1964 Civil Rights Act has been understood to constrain the use of employment tests that have a significant disparate impact on the basis of race, color, sex, religion, or national origin. This aspect of Title VII has made it unlawful to use irrelevant test results to

prevent African Americans from becoming police officers or keep women from becoming fire fighters with unjustified upper body strength tests.

Established Title VII doctrine creates a back-and-forth of shifting burdens, depending on the evidence presented. First, plaintiffs who are challenging an employment test establish a prima facie disparate impact claim by demonstrating that the test or other standard, even if facially neutral, has a disproportionately adverse effect as to a protected category. What is sufficient to constitute substantial disparate impact to make the prima facie case? No “minimal statistical threshold” exists. One “rule of thumb” is the “80% rule” from the Equal Employment Opportunity ("EEOC") Uniform Guidelines that creates a presumption of significant disparate impact when the success rate for the protected group is less than 80% or four-fifths of the success rate for the majority group. A showing of statistical significance is most useful to establish that the disparities did not occur by chance.

If the plaintiff meets the burden of proving disparate impact, the burden shifts to the defendant employer to “demonstrate that the challenged practice is job related for the position in question and consistent with business necessity.” The job-relatedness inquiry is about the validity of the test: “Validation is the scientific way of determining whether a selection device actually does what it is intended to do: to make reliable and meaningful distinctions between individuals on the basis of their ability to perform particular tasks with competence and/or to function successfully in

12. But see Mark S. Brodin, Discriminatory Job Knowledge Tests, Police Promotions, and What Title VII Can Learn from Tort Law, 59 B.C. L. Rev. 2319 (2018) (arguing that Title VII validity requirements are too diluted to offer adequate protection from discriminatory tests).
17. LINDEMANN, supra note 14, at 3.III.A.1.
18. 29 C.F.R. §§ 1607.1, 1607.4(D) (1978). For a discussion applying the 80% rule to professional licensing, see S.E. Phillips, Legal Issues in Credentialing Programs, in TESTING IN THE PROFESSIONS: CREDENTIALING POLICIES AND PRACTICE (Susan Davis-Becker & Chad W. Buckendahl, eds., 2017) 228, 231 (citing to § 1607.4D) (“For example, if 90% of Whites and 70% of African-Americans pass a credentialing examination, there is a presumption of disparate impact because 70% is less than 80% of 90 = 72%”) (emphasis in original).
19. See, e.g., Jones v. City of Boston, 752 F.3d 38, 43 (1st Cir. 2014).
particular jobs.” Content validity is established when the test measures the knowledge, skills, and abilities of the work the applicant seeks to perform.

Over the decades, the requirements of validation pursuant to Title VII have become more specific. Courts consider whether an employment test is supported by a suitable job analysis, shows evidence of competence in test construction, tests content related to job content, tests content representative of job content, and uses a scoring system that reflects job performance.

Even if the defendant employer is able to establish that the test is job-related and consistent with business necessity, plaintiffs may prevail if they can prove the existence of “an alternative employment practice” with less disparate impact that the employer “refuse[s] to adopt.” The EEOC Guidelines advise that, “the user should include, as a part of the validity study, an investigation of suitable alternative selection procedures and suitable alternative methods of using the selection procedure which have as little adverse impact as possible.”

These are the disparate impact principles that were first established in Griggs v. Duke Power Company and later codified in Title VII in the Civil Rights Act of 1991. These substantive inquiries—disparate impact, validity, and less discriminatory alternatives—are the heart of Title VII law and should be equally important for the mechanisms that control access to the legal profession.

PART II: THE CASES THAT PROTECTED BAR EXAMS FROM TITLE VII SCRUTINY ALSO REVEALED DISPARATE IMPACT AND VALIDITY TROUBLES

The protections and processes of Title VII would seem to be highly relevant to bar exams, which have persistent disparate results on the basis of race and ethnicity, questionable validity, and for which less discriminatory alternatives can be pursued. But the validity and job-relatedness of bar exams have not been seriously challenged in large part...
because courts have held that the Title VII principles applicable to employment tests do not reach licensing exams. Licensing entities currently live largely beyond the reach of Title VII because they are not employers, unions, or employment agencies as concerns bar applicants.31

Bar examiners’ immunity from Title VII rests on a collection of cases from the 1970s that upheld highly questionable practices of bar examiners from Georgia, Alabama, South Carolina, and Virginia against challenges by African American applicants.32 Although these cases immunized bar exams from Title VII scrutiny, their discussions of both job-relatedness and disparate impact are worth our attention. These cases provided bar examiners with immunity, but they should not offer bar examiners much comfort.

A. **Tyler v. Vickery (1975)**

In *Tyler v. Vickery*,33 a consolidated class action, the Fifth Circuit rejected the claims of African Americans who challenged the Georgia bar exam on equal protection and due process grounds. The record established significant disparate impact in that “[o]n the February and July, 1973, administrations, slightly more than one-half the black applicants were unsuccessful [] as compared to a failure rate of roughly one-fourth to one-third among white examinees.”34 All forty African Americans who took the July 1972 Georgia bar exam had failed.35

Affirming summary judgment for the defendant bar examiners, the Fifth Circuit panel found no evidence of intentional discrimination, said that Title VII did not apply directly because the Georgia bar examiners were not an employer, employment agency, or labor organization, and refused to import the Title VII disparate impact theory into the constitutional equal protection analysis.36 Notably, the court determined that “[s]ince it is undisputed that the Georgia bar examination has a greater adverse impact on black applicants than on whites and has never been the subject of a professional validation study, acceptance of appellants’

33. 517 F.2d 1089 (5th Cir. 1975).
34. *Id.* at 1092.
35. *Id.*
36. *Id.* at 1095–96. In *Washington v. Davis*, 426 U.S. 229 (1976), a case about a District of Columbia police test with disparate impact against African Americans, the Supreme Court held that evidence of intentional discrimination is required to establish an equal protection violation.
suggested standard of review would inexorably compel the conclusion that the examination is unconstitutional.\footnote{517 F.2d at 1096.}

Finding no intentional discrimination and no fundamental right, the court instead used a rational basis standard to uphold the bar exam.\footnote{Id. at 1102.} Under that relaxed standard, the court established that the bar exam was valid by relying on the fact that the bar examiners designed the test for the purpose for which it was used and that they set the passing score (“70”) for that same purpose, to determine minimum competency.\footnote{Id.} By this standard, bar exams are valid so long as bar examiners did not borrow tests originally used for some other purpose, such as to license doctors.\footnote{Id. at 1103.}

The Fifth Circuit’s extreme deference to the Georgia bar examiners allowed the Court to also reject any problem in the bar examiners’ practice of sometimes using the “informal check” of comparing the law school grades of applicants whose initial bar exam scores were close to the passing line, even though whether to engage in such a review was entirely discretionary with a bar examiner, not based on any set standard or score.\footnote{Id. at 1103.}

The Fifth Circuit also rejected the due process claim, determining that the opportunity offered by Georgia to retake the exam was a sufficient substitute for any process of review.\footnote{Id.} As support, the court cited a law review comment for the proposition that even if one in a hundred exams were wrongly graded to fail instead of pass, “the probability that the same individual would be the victim of error after two reexaminations is literally one in a million.”\footnote{Id. at 1104.} Anyone who has even thought about taking a statistics course—or who read the Tyler v. Vickery discussion of “Black English”\footnote{Plaintiffs offered a deposition of Dr. J. L. Dillard, a linguist and author of BLACK ENGLISH: ITS HISTORY AND USAGE IN THE UNITED STATES (1972). Id. at 1094. “According to Dr. Dillard, many black persons tend to speak an English variant, characterized by structures such as the pre-verbal use of “been”, which has been coined Black English.” Id. Dr. Dillard also testified, however, that some White Southerners also used that pattern of speech and that expertise was required to determine the difference. Id.}—should cringe at this conclusion.

The plaintiffs in Tyler v. Vickery succeeded only in securing a dissent. The dissenting judge agreed with the plaintiffs that the dismissal on summary judgment was inappropriate because the question of racial motivation was inherently fact-bound.\footnote{517 F.2d 1089, 1105, (J. Adam, dissenting).} Specifically, the dissent noted that the testimony of a bar examiner clerk that he maintained the anonymity of test-takers during grading and the mixed evidence regarding identifiability
of “Black English” made proof of purposeful discrimination difficult, but not impossible.  

The dissent also noticed potential problems with the bar examiners’ setting of the cut score. In language equally applicable today, the dissenting judge found that “the selection of cut-off scores, especially when such selection is not subject to review, may be arbitrary. The legality of such decisions may not properly be resolved by mere reference to the good faith judgment of the bar examiners.” Yet the good faith of bar examiners is precisely what supports bar exam cut scores in many jurisdictions today.

B. **Parrish v. Board of Commissioners of Alabama State Bar (1976)**

Shortly after deciding *Vickery*, the Fifth Circuit returned to very similar issues in *Parrish v. Board of Commissioners of the Alabama State Bar*. Once again, African American plaintiffs showed evidence of disparate impact (over ten administrations, African Americans passed the Alabama bar exam at 32% and Whites at 70%) of a bar exam that had not been validated. Following *Vickery*, once again the court found that the disparate impact analysis of Title VII had no application, leaving only constitutional challenges to the Alabama bar exam using a highly deferential standard in which the lack of validation of the bar exam was irrelevant. However, *Parrish* resulted in a narrow victory for the plaintiffs on a discovery issue. Over a partial dissent, the court determined that the trial court incorrectly granted summary judgment without having ruled on the plaintiff’s motion to compel disclosure of the score sheets and grading notes for the February 1973 exam. The Fifth Circuit rejected the bold claim by the bar examiners that their own good faith and credibility in denying any wrongdoing made the documents irrelevant.

---

46. *Id.* (J. Adam, dissenting).
47. *Id.* at 1106 (J. Adam, dissenting).
49. 533 F.2d 942 (5th Cir. 1976). In an earlier stage of the case, the Fifth Circuit had upheld denial of the plaintiffs’ motion to recuse the trial judge. *See Parrish v. Bd. of Com’rs of St. B. of Alabama*, 524 F.2d 98 (1975). The motion to recuse rested on the facts that two years previously the trial judge had served as the president of the Montgomery Bar Association when its bylaws explicitly excluded African Americans from membership. The Fifth Circuit found “essentially an allegation based on the judge's background [that] states no specific facts that would suggest he would be anything but impartial” and that the “claim of bias is general or impersonal at best.” *Parrish*, 524 F.2d at 946–47.
50. 533 F.2d at 944.
51. *Id.* at 947.
52. *Id.* at 949.
53. *Id.* at 946–47.
54. The bar examiners asserted the circular argument that the documentation was irrelevant because no evidence had contradicted their own “positive affirmation . . . that they were not guilty of any improper conduct.” *Id.* at 947.
In *Richardson v. McFadden*, African American applicants argued that their equal protection challenge to the South Carolina bar exam should incorporate Title VII’s framework regarding disparate impact and job-relatedness. *Richardson* was an important victory for South Carolina’s bar examiners with continuing impact today. But the Fourth Circuit in *Richardson* was impressed by neither the validity nor the quality of South Carolina’s bar exams.

Regarding validity, or job-relatedness, plaintiffs argued that the state had failed to “demonstrate that the bar examination is job related as opposed to simply a measurement of general educational preparation.” The plaintiffs in *Richardson* argued that validity could not be sufficiently established by reference to law school grades, but that a job analysis was required. Sadly, this serious criticism of bar exams is still apt. Bar exams today largely test knowledge of first-year subjects and first-year analytical skills rather than evaluating the broader range of job-related lawyering skills. The *Richardson* plaintiffs were unsuccessful in their challenge, not because the Fourth Circuit was impressed by the validity of the exams, but because the Court held that Title VII standards did not apply:

We believe the record is inadequate to demonstrate either “criterion” (“predictive”), “content,” or “construct” validity under professionally acceptable methods. Thus, if we were to determine that Title VII standards were applicable, it would be necessary to reverse and declare the South Carolina Bar Examination constitutionally invalid.

Without the ability to rely on Title VII’s disparate impact theory to prove discrimination, the plaintiffs attempted to prove intentional race discrimination. They introduced an historic timeline to show a pattern of South Carolina bar examiners making major changes to admissions policies to shut down access just as African Americans were in a position to use those paths into the profession. The plaintiffs focused on three policy changes: elimination of the diploma privilege, which had provided automatic admission to the bar for graduates of the State’s one accredited law school; elimination of the option of “reading for the bar”; and

abolishment of reciprocity. Plaintiffs produced evidence that South Carolina eliminated its diploma privilege “in 1950, three years (the normal law school term) after a ‘separate but equal’ law school was started at South Carolina State College, a black school.”62 “Reading law” was “eliminated in 1957, ‘coincidentally’ shortly after a black applicant used this method.”63 Reciprocity was “abolished in January 1972, not long after a black member of the Oklahoma Bar applied under the reciprocity rule.”64 The court found this evidence circumstantial and not sufficient to prove intentional discrimination.65

Having failed in their claim of intentional discrimination, the plaintiffs sought to prove that the licensing test did not bear “a fair and substantial relationship” to the determination of minimal competency as a lawyer.66 As with respect to validity, the Fourth Circuit expressed little confidence in the South Carolina bar examiners’ methods of determining their cut score or of scoring individual exams.67 Witheringly, the Fourth Circuit described the evidence introduced to validate the cut score as “very subjective and general in nature and hardly acclaimed by the educational testing experts who testified.”68

The court appeared even less impressed by methods used to score bar exams, which it described in detail. The court recounted the testimony of two examiners, one who appeared to read the whole exam and assign an overall grade, the other who assigned points for individual sections. The first described his grading method as assigning a number grade based on the “totality” of multiple questions and “the student’s evidence of ability in answering the whole.”69 He explained that he did not use a point system, but, instead:

It is a matter, in the preliminary process, of giving a mental assessment of importance to this question, or lesser importance to this question, or lesser importance to that question. When I have finished grading a paper, what I would have is one grade that I put on there.70

62. Id. (parenthetical in original).
64. Richardson, 540 F.2d at 747.
65. Id. at 747–48.
66. Id. at 749.
67. The court acknowledged that “[w]hether the passing score selected by the Bar Examiners bears ‘a fair and substantial relationship’ to the determination of minimal competency presents a much more difficult question.” Id.
68. Id.
69. Id.
70. Id. at 749–50.
Surprisingly, the Fourth Circuit found this “[p]erhaps the testimony most supportive of the validity of the cut-off score.”\textsuperscript{71}

The court explained that other examiners “employed a very mechanical system, assigning points to particular parts of questions, summing those points, and then in some cases obtaining the 70 cut-off line simply by raising the highest score to an ‘A’ or perfect score.”\textsuperscript{72} The court was not impressed by these methods, declaring that “[w]e tend to agree with appellants' expert that, if this second system is utilized in the precise manner described by the Bar Examiners, it would be almost a matter of pure luck if the ‘70’ thereby derived corresponded with anybody's judgment of minimal competency.”\textsuperscript{73}

The court’s deference to the examiners was so great that “almost a matter of pure luck” was deemed sufficient. In essence, the court could not see any greater accuracy from either of the two contrasting grading methods:

\begin{quote}
[A]bsent professionally validated, administered, and evaluated examinations, it is not clear that to require grading along the lines discussed by [the gestalt examiner] rather than the more mechanical and arbitrary method […] is anything more or less than to demand greater subjectivity. It is not at all certain which of these two, both of whom are competent lawyers but laymen at question design and evaluation, generates numerical scores which more accurately reflect their ‘true’ evaluation of competency.\textsuperscript{74}
\end{quote}

\textsuperscript{71} Id. at 749. The court’s full description of this scoring method is worth considering:

My own approach is that, preliminary to the grading process, to go back to the exam question and in studying through them very carefully, I make a mental assessment of the importance to be attached to each one. I do not go through, for my own purposes: I feel that it's a mechanical process of assigning a point value to each question. I then read the examinations. I treat them not as questions to which so may [sic] points were assigned to this or to that issue of this question, but as a totality and assign to that paper a grade which I think is reflective of the student's evidence of ability in answering the whole.

Q. What form would that grade take, a letter grade?
A. It would be a numerical grade. And I think, for my own testing purposes, the magic passing point is 70, and I range upward or downward through that.

Q. All right sir, as I understand it, you read the entire paper and then assign a single numerical grade, with 70 as passing?
A. That is right.

Q. As I understand it, you don't attempt to assign points to any particular portion of the test?
A. Not in a numerical fashion. It is a matter, in the preliminary process, of giving a mental assessment of importance to this question, or lesser importance to this question, or lesser importance to that question. When I have finished grading a paper, what I would have is one grade that I put on there.

\textit{Id.} at 749–50.

\textsuperscript{73} Id.

\textsuperscript{74} Id.
Ironically, these questionable methods of grading bar exam essays and performance tests probably continue today in part because of these decisions from the 1970s that combined rhetorical critique of the examiners’ methods with a legal affirmation and shield from Title VII.

After having noted that the examiners were not trained in test design, the Fourth Circuit upheld the tests because the bar exams were designed and scored by the bar examiners for the right purpose: “In view of the fact that all Examiners both designed their exams and assigned scores so as to indicate their judgment as to minimal competency, we cannot find the results obtained so unrelated to the State's objectives as to violate the Equal Protection Clause.”75 Good faith controlled.

In addition to the claims made by the class of plaintiffs, two individual plaintiffs used a chart of borderline scores and pass or fail results to argue that the results as to them were arbitrary and capricious.76 Their claims did not challenge the method by which their exams were scored, because each person was failed in spite of having apparently achieved the points required to pass. Specifically, these two plaintiffs argued that each had met or exceeded the required score of 70 because they had scored 70.5 and 69.6 respectively, and the bar examiners standard practices included “rounding up.”77

The court was not persuaded by the bar examiners’ attempts to justify and reconcile the apparent inconsistency with which borderline cases were treated. The examiners asserted that an applicant could “fail” the bar exam, even with a cumulative passing score, based on “‘the configuration of scores’ and Examiners' notes containing remarks on the general quality of papers” without any further review of the actual exam papers.78 But the

court found that the bar examiners’ explanations of their judgments about “the configuration of scores” did not actually explain the results on the chart and that “there [was] no consistently applied distinction between them.”

The more the examiners attempted to describe their methods, the more arbitrary they appeared. The examiners explained at oral argument that two candidates with identical scores could pass and fail, or a candidate with a lower score could pass and one with a higher score fail, based on the “written comments [that] often accompany borderline scores and are employed to make these difficult decisions.”

The court was skeptical about the bar examiners’ justification for having passed one applicant and failed another with an identical score:

The one who passed failed three Examiners and, in addition, failed the Multistate portion of the exam. The one who failed it also failed three Examiners but passed the Multistate portion. The Examiners told us that this was perfectly reasonable because comments on the grading sheets corresponded with the ultimate results. The one who failed was noted to be “poor in expressing himself” and “didn't seem to have an understanding of legal principles.’ The one who passed was ‘marginal plus’ and ‘had some good answers.’

The Fourth Circuit found this reliance on comments to be “irreconcilable” with the examiners’ claims about the precision of their numerical scores: “It is not possible to pursue the goal of objectivity and also put ultimate reliance on subjective notes as general and vague as those.” The trial court concluded that “the correspondence of a score of 70 with even their own judgment of minimal competency was little more than fortuitous” and found in favor of the two individual plaintiffs on the basis of arbitrary and capricious scoring that violated due process and equal protection.

In its first consideration of this case, the Fourth Circuit agreed and ordered that the matter be remanded to the district court to certify the

---

79. “But, appellants point out, individuals who had lower cumulative totals and not obviously different “configuration of scores” were passed. As to Spain, the Examiners' basic response is that one cannot expect perfection in the difficult borderline cases. As to Kelly, they argue that no one who failed three Examiners had a lower score and was judged to have passed the exam. They contend that individual # 10 “passed because he passed four examiners,” indicating that passing would be automatic in such situations. Brief for Appellee at 63 n.37. That, at least, was their response before applicant # 17 was brought to their attention. He passed four Examiners, had a higher cumulative score than # 10, and still failed the examination.” Id.

83. Id. at 751.
admission to the South Carolina bar of the two African-American men who had scored 70.5 and 69.6.\textsuperscript{84}

That sole victory from the Fourth Circuit was short-lived. On rehearing \textit{en banc}, the Court reversed that portion of the decision. Instead the Court affirmed the district court that had denied relief, differing on whether the federal court lacked subject-matter jurisdiction (deferring to the Supreme Court of South Carolina’s authority over bar admission) or whether the claim had not been established.\textsuperscript{85} The court seemed to say that proof that two defendants failed two plaintiffs who should have been passed was an insufficient basis for any remedy:

Significant also, with respect to Spain and Kelly, are the facts that of the aggregate 828 examinations given during the eight times that the bar examination was administered over a four-year period, \textit{only these two examples of alleged discrimination were proved}, and that Spain and Kelly continued to fail on subsequent reexaminations. Succinctly stated, we simply do not think that Spain and Kelly proved their case.\textsuperscript{86}

\textit{Richardson v. McFadden} stands for the principle that claims of racial bias in bar exams require proof of intentional discrimination, scrutiny,\textsuperscript{87} but it should also be remembered as a Fourth Circuit decision that prevented two African American men from being admitted to practice law in South Carolina because each passed the bar exam only once.

\textbf{D. \textit{WOODARD V. VIRGINIA BOARD OF BAR EXAMINERS} (1979)}

The circuit decision that may be cited most often for the principle that bar examiners are not subject to Title VII is \textit{Woodard v. Virginia Board of Bar Examiners},\textsuperscript{88} a 1979 Fourth Circuit per curiam opinion that upheld two district court rulings in favor of Virginia’s bar examiners. In the first district court decision, the court ruled that Title VII did not apply to bar examiners because they were not employers within the meaning of the statute. Faced with Title VII authority that seemed to have expanded its reach beyond traditional employers, the district court distinguished bar exams:

The EEOC guidelines in this area were developed in the context of traditional employment practices. The employment tests utilized in the

\textsuperscript{84} \textit{Id.} at 751–52.
\textsuperscript{85} \textit{Richardson v. McFadden}, 563 F.2d 1130, 1130–32 (4th Cir. 1977).
\textsuperscript{86} \textit{Id.} at 1132 (emphasis added).
\textsuperscript{87} \textit{See Pettit v. Ginerich}, 582 F.2d 869 (4th Cir. 1978) (per curiam decision rejecting claims of seven African American applicants to the bar in Maryland based on Richardson); \textit{see also} Delgado v. McTighe, 522 F.Supp. 886 (E.D. Pa. 1981) (upholding Pennsylvania bar exams as “neutral on their face and rationally serv[ing] the purpose for which they have been designed,” \textit{id.} at 894–95, and noting that Richardson upheld bar exam essay questions with no model answer and multiple grading methods, \textit{id.} at 897).
\textsuperscript{88} \textit{See generally} Woodard v. Virginia Bd. of B. Exam’rs, 598 F.2d 1345 (4th Cir. 1979).
industrial setting are designed to measure an individual's ability to perform certain limited functions or operate particular machinery. The bar examination, however, serves a much broader purpose.  

In this way, the court explicitly drew on the profession’s public role to justify immunity from Title VII.

After denying the plaintiff’s efforts to certify a class, in its second opinion the district court held, following Richardson, that the court had no subject matter jurisdiction because the case sought to challenge an individual’s results, a matter for which only the Virginia Supreme Court or the U.S. Supreme Court had jurisdiction.  

On appeal, the Fourth Circuit issued a one-page per curiam opinion that upheld the district court decisions against the plaintiff. Following Vickery, the Fourth Circuit held that governmental licensing boards are not employers and therefore, are not covered by Title VII.  

E. LIMITING THE OUTSIZED IMPACT OF VICKERY, PARRISH, RICHARDSON, AND WOODARD.

Litigation that challenges bar examiners’ immunity from Title VII based on these cases could be important, and analogous claims may exist under state nondiscrimination statutes and constitutions. But that is not my purpose here. My argument is that the legal profession’s rules of professional responsibility require a showing of validity and job-relatedness whenever bar exams have a disparate impact, and the simple structure established for Title VII cases can be borrowed for such inquiries.

PART III: PROFESSIONAL RESPONSIBILITY REQUIRES SCRUTINY OF THE VALIDITY OF AND ALTERNATIVES TO ANY LICENSING TESTS WITH DISPARATE IMPACT.

Attorney licensing authorities should not continue to exploit the gap in Title VII created by Vickery, Parrish, Richardson, and Woodard, which has permitted bar exams to avoid legal scrutiny related to the lethal combination of disparate impact and unproven validity that stain bar exams.

One theme of the Title VII disparate impact cases is that unlawful discrimination can exist even without any intent to discriminate. Good faith and good intentions are no defense. Similarly, using unvalidated bar exams

91. 598 F.2d 1345.
92. Id. at 1345, n.1.
93. Id. at 1346.
with known disparate impact violates ethical requirements related to public interest, competency, and non-discrimination. Good faith, best intentions, and hard work by bar examiners should not be sufficient to allow disparate bar passage rates to continue without serious scrutiny of the job-relatedness and business necessity of bar exams and investigation of less discriminatory alternatives. Professional responsibility for public protection, competence, and non-discrimination support the need for valid, nondiscriminatory bar exams, even in the absence of Title VII enforcement.

A. PUBLIC PROTECTION.

Bar examiners and state supreme courts are correctly emphatic that their core responsibility in licensing is to protect the public. Bar examiners claim that specific role in the context of the entire profession’s duties to the public. The Preamble to the Model Rules of Professional Conduct describes a lawyer as “an officer of the legal system and a public citizen having special responsibility for the quality of justice.” Further, “[a] public citizen, a lawyer should seek improvement of the law, access to the legal system, the administration of justice and the quality of service rendered by the legal profession.” Licensing, as an aspect of attorney regulation, should be undertaken in the public interest because “[a] lawyer should help the bar regulate itself in the public interest.”

Some states have codified the organized bar’s obligation to protect the public. For example, California’s Business & Professional Code establishes that, “Protection of the public, which includes support for greater access to,
and inclusion in, the legal system, shall be the highest priority for the State Bar of California and the board of trustees in exercising their licensing, regulatory, and disciplinary functions.”

The principle of public protection means that licensing requirements should be valid, that is, closely related to competency as a new attorney. The commitment to public protection also means that licensing requirements should protect the entire public, including fair access to the profession for qualified candidates from diverse communities. The legal profession protects the diverse public better if it is itself diverse.

B. COMPETENCE

Any professional licensing test should protect members of the public by ensuring that new members of the profession possess minimal competence to practice that profession. Thus the purpose of bar exams is to ensure that new lawyers are minimally competent to practice law. A test is valid if it tests what it purports to test. A test that bears a weak relationship to actual competence is not valid. Bar exams are valid, then, when they do a good job of distinguishing between applicants who are barely minimally competent to practice law and those who are below that standard.

Competency is also the underlying professional responsibility requirement that justifies bar exams in the first place. A lawyer cannot take on representation for which he or she is not competent. Under the Model Rules of Professional Conduct, the first duty owed by the lawyer to the client is competence. Rule 1.1 provides that, “A lawyer shall provide competent representation to a client. Competent representation requires the

99. For one of many examples, clients of color may have difficulty finding attorneys of color to whom they can relate. See Amy Myrick, Robert L. Nelson, & Laura Beth Nielsen, Race and Representation: Disparities in Representation for Employment Civil Rights Plaintiffs, 15 LEGIS. & PUB. POL’Y 705, 723 (2012).
103. For a discussion of various understandings of competency that complicate attorney licensure, see Howarth & Wegner, supra note 8, at 398–406.
104. MODEL RULES R. 1.16, cmt. 1 (“A lawyer should not accept representation in a matter unless it can be performed competently, promptly, without improper conflict of interest and to completion.”).
legal knowledge, skill, thoroughness and preparation reasonably necessary for the representation.”105

The Model Rules do not tell us much about what competence looks like, beyond this general description that rests on “reasonably necessary” knowledge and skills. But hints exist. Perhaps oddly in this age of specialization, the Comment to Rule 1.1 suggests that the default requirement for competence in many situations means the “proficiency of a general practitioner.”106 The Comment also identifies “some important legal skills” including “the analysis of precedent, the evaluation of evidence and legal drafting” that are “required in all legal problems.”107 The Comment identifies issue spotting (“determining what kind of legal problems a situation may involve”) as “[p]erhaps the most fundamental legal skill,” a “skill that necessarily transcends any particular specialized knowledge.”108 This central professional responsibility principle of “competence” requires licensing requirements to measure competence in order to be valid.

C. NONDISCRIMINATION

The legal profession has also adopted various principles, rules, and even statutory obligations related to nondiscrimination, diversity, and inclusion, many of which are directly relevant to the problems of disparate racial and ethnic impact of bar exams.

Since 2008, the American Bar Association has included as one of its four goals to “Eliminate Bias and Enhance Diversity,” which includes two “objectives”: “1. Promote full and equal participation in the association, our profession, and the justice system by all persons” and “2. Eliminate bias in the legal profession and the justice system.”109 Both objectives are undermined by licensing tests that disproportionately prevent potential attorneys of color from becoming licensed.

More recently, in 2016 the Model Rules of Professional Conduct were amended to explicitly prohibit discrimination.110 Rule 8.4 now defines as

105. MODEL RULES R. 1.1.
106. MODEL RULES R. 1.1 cmt. 1.
107. MODEL RULES R. 1.1 cmt. 2.
108. MODEL RULES R. 1.1 cmt. 2. The Comment also reminds us that, “[a] lawyer can provide adequate representation in a wholly novel field through necessary study.” Id.
professional misconduct conduct that the lawyer knows or reasonably should know is discrimination related to the practice of law. Specifically, under the *Model Rules* it is now professional misconduct for a lawyer to:

(g) engage in conduct that the lawyer knows or reasonably should know is harassment or discrimination on the basis of race, sex, religion, national origin, ethnicity, disability, age, sexual orientation, gender identity, marital status or socioeconomic status in conduct related to the practice of law.

By its express terms, this prohibition on discrimination is not limited to work with clients but extends to other activities “related to the practice of law.” That certainly should include admissions activities determining access to the profession.

Importantly, the Comment to the Rule tells us to interpret the Rule’s meaning by looking at substantive antidiscrimination law: “The substantive law of anti-discrimination and anti-harassment statutes and case law may guide application of paragraph (g).” Thus, even though Title VII by its own terms has been held not to reach attorney licensing, Rule 8.4(g) suggests that the legal profession should borrow the methods and approaches of Title VII to ensure that its admissions practices are nondiscriminatory.

The *Model Rules* are not the only source of ethical or professional responsibility obligations related to nondiscrimination in attorney licensing tests. California, again, recently added explicit statutory recognition that the State Bar’s obligation to protect the public includes improved access to and inclusion in the profession. The Colorado Supreme Court, as another example, has adopted the explicit purpose of “[p]romoting diversity, inclusion, equality and freedom from discrimination” as one of its objectives “in regulating the practice of law in Colorado in the public interest.”

*https://www.americanbar.org/groups/construction_industry/publications/under_construction/2019/spring/model-rule-8-4/*

111. *Model Rules R. 8.4(g).*
112. *Id.*
113. *Model Rules R. 8.4 cmt. 4.* Some states have rejected or modified Model Rule 8.4(g). For example, California apparently adopted a more limited version of Rule 8.4.1 that prohibits discrimination “in representing a client” or in “law firm operations.” *See Cal. Rules of Prof. Conduct R. 8.4.1* (approved by the Supreme Court, Effective November 1, 2018) (“(a) In representing a client, or in terminating or refusing to accept the representation of any client, a lawyer shall not: (1) unlawfully harass or unlawfully discriminate against persons* on the basis of any protected characteristic; or (2) unlawfully retaliate against persons. (b) In relation to a law firm’s operations . . . .”).
115. *See Cal. Bus. & Prof’l Code § 6001.1.* “Protection of the public, which includes support for greater access to, and inclusion in, the legal system, shall be the highest priority for the State Bar of California and the board of trustees in exercising their licensing, regulatory, and disciplinary functions.” *Id.* (emphasis added) (the emphasized clause was added by Stats. 2018, c. 659 (A.B.3249), § 3, eff. Jan. 1, 2019.).
interest.”116 Disparate impact of the bar exam would be evidence that these goals of inclusion and nondiscrimination are not being accomplished.

D. FROM RHETORIC TO OVERSIGHT

Oversight matters. The persistent problems of attorney licensing have flourished in the absence of meaningful statutory or constitutional oversight. But well-established principles of professional responsibility and legal ethics also provide a mandate for scrutiny of licensing mechanisms that disproportionately prevent admission on the basis of race, ethnicity, gender, and other protected classes.117 The privilege of self-regulation carries the responsibility to exercise that regulation in a manner that is aligned with the profession’s stated goals. Therefore, even without Title VII, attorney licensing tests that disproportionately exclude protected groups must be shown to be job-related, and less discriminatory alternatives pursued by the bar as if Title VII applied.

PART IV: PROFESSIONAL RESPONSIBILITY LICENSING SCRUTINY:
DISPARATE IMPACT; VALIDITY; LESS DISCRIMINATORY ALTERNATIVES

Our professional obligations to protect the public by ensuring competence with non-discriminatory entrance requirements should be met with the same three-step scrutiny already well-established by Title VII for employment tests,118 which could be called professional responsibility licensing scrutiny. Does the test have a disparate impact? If so, can the testers demonstrate sufficient job-relatedness (validity)? Even if a test with disparate impact is shown to be valid, is there a less discriminatory alternative with equal (or greater) validity?

117. Gender differences related to bar exam test components are also well-established. See, e.g., Susan M. Case, Men and Women: Differences in Performance on the MBE, 74 B. EXAM’R 44, 44 (May 2006) (“men outperform women on the MBE by about 5 points”); Research Department, NCBE, Impact of Adoption of the Uniform Bar Examination in New York 117–24 (2019), available at https://www.nybarexam.org/UBEReport/ny%20UBE%20Adoption%20Part%202%20Study.pdf (showing that men performed better on the MBE than women and also on the overall exam). Because men outscore women on the MBE, while women score better than men on the essays, decisions to give greater weight to the MBE and less to the essays are knowingly hurting women. My focus here, however, is race and ethnicity, where bar passage differences are more dramatic.

118. See supra text accompanying notes 114.
A. DISPARATE IMPACT

The well-known and widely decried lack of diversity of the legal profession has many causes, one of which is disparate results on our licensing tests. Evidence of the disparate impact of bar exams is overwhelming. Many jurisdictions do not disclose bar passage rates by race or ethnicity, but the available information reveals persistent significant racial and ethnic disparities in bar exam passage.

I. DISPARATE IMPACT IS ESTABLISHED

The most complete demographic information comes from California, which is unusual in that it provides race and ethnicity bar exam passage rates for every administration of its bar exam. These results demonstrate persistent, consistent disparities based on race and ethnicity. For example, the Table 1 lists the first-time July pass rates for graduates of California
ABA accredited law schools in 2018, 2017, and 2016, broken down by ethnicity.122

**Table 1: First time pass rates for graduates of California ABA accredited law schools**

Reports that have been occasionally released for New York bar exam pass rates also show wide disparities. The most recent statistics come from

124. *Id.*
New York’s report on test results for the five administrations from July 2015 to July 2017, a report that studied the impact of New York’s adoption of the Uniform Bar Exam (“UBE”) in July 2016.125 Disparate results preceded and followed adoption of the UBE. Table 3 details that for each of the five bar exam administrations studied, for both all test-takers and domestic, first time test-takers, the pass rate for Caucasian/White was above the overall average. 126 The pass rate for each of the minority categories was below the average. 127 The statistics for the same administrations for domestic-educated, first time takers, listed in Table 4, were similar.128

These disparities would establish the need for further scrutiny if Title VII applied.129 These disparate results are not new.130 An earlier NCBE report analyzing the 2006 New York results explained that, of domestic-educated first-time bar exam takers, “[t]he Caucasian/White group had an average total score of about 720, the Asian/Pacific Islander group had an average total score of about 703, the Hispanic/Latino group had an average total score of about 720. The pass rate for each of the minority categories was below the average.127 The statistics for the same administrations for domestic-educated, first time takers, listed in Table 4, were similar.128

score of about 682, and the Black/African American group had an average total score of about 671,”131 disparities the authors described as “large.”132

NCBE researchers also undertook a national study of racial and ethnic disparities, which showed that the average 2006 MBE score for Whites was 149.3, for Asians was 146.1, for Hispanics was 143.3, and for Blacks was 137.9.133 These substantial disparities were described as consistent with studies from New York and Texas.134

The most authoritative national bar passage study was prepared by Linda F. Wightman for the Law School Admissions Council in the 1990’s.135 Based on 23,086 test-takers, the Wightman study showed first-time bar passage rates of 91.93% for Whites, 61.40% for Blacks, 66.36% for Native Americans, 75.88% for Mexican Americans, 74.81% for Hispanics, and 80.75% for Asian Americans.136 Although Wightman’s analyses are more than two decades old, more recent analyses have shown little change in racial disparities.137

II. CUT SCORE DECISIONS CAN EXACERBATE DISPARATE IMPACT WHILE UNDERMINING VALIDITY.

The science of testing has led professional licensers—of nurses, engineers, dentists, and others—to use a single, professionally developed multiple choice test as the anchor for those professions’ assessment of minimal competence.138 For the legal profession in the United States, this function is performed by the NCBE’s Multistate Bar Exam (“MBE”).139 But

135. LINDA F. WIGHTMAN, LSAC NATIONAL LONGITUDINAL BAR PASS STUDY (1998). The authority of Wightman’s research is based on its unmatched combination of scale, research rigor, and transparency.

136. Id. at 27.

137. See supra text accompanying notes 26 (presenting race and ethnicity results from California and New York).

138. For an explanation of why multiple choice tests are used for this purpose and the scaling process by which written answers are scaled to the multiple choice tests, see Joan W. Howarth, The Case for a Uniform Cut Score, 42 J. OF LEGAL PROF. 69, 72 (2017) [hereinafter Cut Score], citing to Susan M. Case, Back to Basic Principles: Validity and Reliability, B. EXAM’R 23, 23 (Aug. 2006). The scaling process permits the MBE cut score to determine the passing percentage for the entire exam, so the cut score could be called the bar exam cut score or the MBE cut score, as I prefer.

the legal profession veers away from psychometric standards and passing score (cut score) determinations in other professions in a very significant way. Other professions establish a uniform, national cut score for the multiple-choice test used to establish minimal competence.\(^{140}\) By contrast, due to deeply entrenched traditions and preferences in the legal profession, each jurisdiction has held on to its authority to set its own MBE cut score.\(^{141}\) This tradition of strong local control has resulted in wide disparities in how states use the same test to assess the same thing, minimal competence to practice law. The cut score is an important aspect of the validity of the licensing test.\(^{142}\) The wide range of cut scores used for the MBE undermines confidence that any one of them accurately reflects minimal competence to practice law.

The setting of cut scores also plays a powerful role in the disparate impact of bar exams.\(^{143}\) Selecting a different cut score is probably the easiest way for bar examiners and state courts to reduce the disparate impact of their exams. Bar examiners should understand that “[a]rtificially high bar passage standards are of special concern because those standards can have a disproportionate impact on minority applicants to the bar.”\(^{144}\)

Some jurisdictions have pulled back from increasing their cut score in part because of the evidence that increasing the cut score would exacerbate pre-existing disparities in bar passage rates. In the midst of a movement in many jurisdictions to increase bar exam cut scores,\(^{145}\) the Minnesota Supreme Court chose not to increase their cut score\(^{146}\) and New York implemented only the first of three planned increases.\(^{147}\) In both

147. See MROCH ET AL., *NY REPORT 2007*, supra note 135. “On September 24, 2004, the New York State Board of Law Examiners (“NYBLE”) announced that the passing score on the New York Bar Examination would increase from 660 to 675 over a three-year period. [please provide citation]. The score was to increase five points a year from July 2005 to July 2007. [please provide citation]. The first of the three increases was
jurisdictions, proposed increases were rejected because of concerns that the justification for the increases was based on flawed methodology and that the increases would exacerbate pre-existing racial and ethnic bar passage disparities.

In their report regarding New York’s possible cut score increase, NCBE psychometricians explained two reasons that raising New York’s cut score would exacerbate racially disparate bar passage outcomes. First, the largest impact falls on groups “with average scores in or near the range over which the passing score is projected to vary.” African Americans and other minorities were the groups whose average scores were closest to the existing cut score and the proposed changes, so the possible cut score increases would have had a disproportionate effect on them. Also, even an identical change across all demographic groups would be proportionately greater for any groups with lower original pass rates.

California’s study of its bar exam cut score provides more recent confirmation of the racial and ethnic impact of cut score decisions. This study used the scores of the actual 2016 California bar exam takers to calculate what the passage rates would have been with several lower cut scores. The results showed that for each of the cut scores studied, ranging from the low of New York’s to the high of California’s, the higher the cut score, the larger the racial disparities in pass rates. Dramatically, the

AND ADMISSION TO THE BAR, REPORT IN OPPOSITION TO THE BOARD OF LAW EXAMINERS’ PROPOSAL TO INCREASE THE PASSING SCORE ON THE NEW YORK BAR EXAMINATION at 8–18 (Jan. 2003) [hereinafter NYC BAR 2003 REPORT], available at https://www.nycbar.org/pdf/report/BARSCO~2.pdf [https://perma.cc/N4WU-7J7Q].

149. See, e.g., Merritt et al, Raising the Bar, supra note 8; NYC BAR 2003 REPORT, supra note 152; MROCH ET AL., NY REPORT 2007, supra note 135; Transcript, supra note 150.

150. “The current and proposed increases in the passing score tend to have the largest impact on groups with average scores in or near the range over which the passing score is projected to vary (660 to 675).” MROCH ET AL., NY REPORT 2007, supra note 135, at 85.

151. “Among the domestic-educated first-time takers, the Black/African American group and other minority groups tend to suffer sharper declines in pass rates than the Caucasian/White group as the passing score increases (see Table 4.2).” Id.

152. “Because the racial/ethnic minority groups have lower pass rates to begin, a decrease of a few percentage points in the pass rate has a larger proportional impact on the pass rates for these groups.” Id.

154. Id.
report showed that of the 3248 people who passed the July 2016 California bar exam, 119 were African American. If California had used New York’s cut score, 301 African Americans would have passed.

Lowering cut scores improves pass rates for every category of test-takers, but not evenly. If California had lowered its cut score to the score currently used by New York, Connecticut, the District of Columbia, Illinois, Iowa, Kansas, Maryland, Montana, New Jersey, and South Carolina, the bar passage rate of Whites in 2016 would have increased by 51.7%; of Asians by 71.7%; of Hispanics by 93.7%; and of Blacks by 142.3%. In spite of this information, and the State Bar’s acknowledgment that no evidence suggested that the public is less protected in states with lower cut scores, the California Supreme Court declined to decrease its unusually high cut score.

Cut score decisions permit jurisdictions to choose to reduce or exacerbate the racial and ethnic disparate impact of bar exams. Under either Title VII or professional responsibility licensing scrutiny, choosing to keep a cut score with established disparate impact requires strong evidence that the increase in the cut score is job-related.

Disparate impact having been established, jurisdictions should have to show evidence of job-relatedness to select any cut score above 130, the second-lowest cut score in the United States, which is currently being used successfully by Alabama, Minnesota, Missouri, New Mexico, and North Dakota. These five states cover different regions of the country, and

155. Id.
156. Id.
159. Id. at ___.
161. “[E]nforcement agencies and many courts have taken the position that sufficient proof of job relatedness must support the use of a cutoff score that increases disparate impact.” LINDEMANN, supra note 14, at 4–55 to 56 & n. 273.
162. 130 is the lowest cut score currently being used by a cohort of states. See NCBE, COMPREHENSIVE GUIDE TO BAR ADMISSIONS REQUIREMENTS 2019, at 32–33 (Chart 10: Grading and Scoring), available at http://www.ncbex.org/assets/BarAdmissionGuide/NCBE-CompGuide-2019.pdf [https://perma.cc/V7BJ-PR3Z]; see also Johnson, Knots in the Pipeline, supra note 124, at 405–19 (recommending 130 as uniform cut score to diversify the profession). Wisconsin uses a 129, but Wisconsin’s diploma privilege for all law graduates of Wisconsin and Marquette makes Wisconsin a weak example for a well-established cut score, although an
include a variety of practice areas, such as international firms in Minnesota and Missouri, rural practices in several of these states, and private practice, government, and nonprofit practice in all of them. No evidence suggests that the public suffers less competent lawyers in these states than in others.  

III. DISPARATE IMPACT RESPONSIBILITY.

Bar examiners defend disparate results on bar exams by arguing that bar passage differences reflect prior differences, such as on the LSAT and in law school grades. Bar examiners cannot be expected to eliminate preexisting differences at the licensing stage, the final step on the path to the profession. But bar examiners should be expected to eliminate unnecessary disparities in their test results. Unjustified disparities offend core professional responsibilities of the legal profession to eliminate discrimination. Beyond that, professional testing standards require careful scrutiny of disparate results. After explaining that fairness in testing does not mean eliminating all disparities in results, the most authoritative source of testing standards reminds test designers that “most testing professionals agree that group differences in testing outcomes should trigger heightened scrutiny for possible sources of bias.” In the world of bar exams, that scrutiny has focused on item selection and question drafting. Cut score scrutiny and increased focus on job-relatedness, or validity, are equally important. The responsibility to address these longstanding disparities falls squarely on the state supreme court justices and bar examiners who have the responsibility to ensure that the admissions processes they oversee are nondiscriminatory.

B. VALIDITY

163. Research to investigate this question could be very useful. For a discussion of complexities of such research, see Deborah J. Merritt, Bar Exam Scores and Lawyer Discipline, LAW SCHOOL CAFÉ (June 3, 2017), https://www.lawschoolcafe.org/2017/06/03/bar-exam-scores-and-lawyer-discipline/ [https://perma.cc/6RMS-F62L].

165. STANDARDS, 2014, supra note 106, at 54. “Examination of group differences also may be important in generating new hypotheses about bias, fair treatment, and the accessibility of the construct as measured; and, in fact, there may be legal requirements to investigate certain differences in the outcomes of testing among subgroups.” Id.

Following Title VII, once the disparate impact of a bar exam is established, the second step of professional responsibility licensing scrutiny requires bar examiners to show that the exam is valid, meaning sufficiently job-related. Bar exams are valid to the extent that they in fact measure minimal competence to practice law, as they are meant to do. But criticisms of the validity of bar exams are widespread and longstanding, and they ask the same questions concerning job-relatedness and validity that employers are required to answer pursuant to Title VII.

I. MISDIRECTION TO THE STUDY OF LAW, NOT THE PRACTICE OF LAW

One persistent criticism is that bar exams look backwards to law school rather than forward to law practice, testing the academic skills of law school rather than the professional skills required for minimum competence in practice. This criticism carries weight because of the surprising distance between law school and practice. For one hundred and fifty years, law schools in the United States have been largely aligned with the “scientific”

167. See supra text accompanying notes (explaining validity and job-relatedness).
168. See infra text accompanying notes.
169. See, e.g., Deborah Jones Merritt, Validity, Competence, and the Bar Exam, AALS NEWS, ASSOC. AM. L. SCHS., No. 2017-2, at 11, https://www.aals.org/wp-content/uploads/2017/05/AALSnwes_spring17-v9.pdf (critiquing validity of bar exams) (hereinafter Validity); Joan Howarth, Teaching in the Shadow of the Bar, 31 U.S.F. L. REV. 927, 930 (1997) (summarizing earlier criticisms of bar examinations); Society of American Law Teachers Statement on the Bar Exam, 52 J. LEGAL EDUC. 446 (2002) (critiquing traditional bar examinations on three principal grounds: failure to adequately measure professional competence to practice law, negative effects on law school curricular development and the law school admission process, and creation of significant barriers to achieving a more diverse bench and bar); Curcio et al, Testing, supra note 8, at 225 (“As far back as 1992, the Committee on Legal Education of the New York City Bar Association identified problematic aspects of the bar exam and expressed the view that ‘the NYS Bar Exam does not adequately or effectively test minimal competence to practice law in New York.’”).
170. See, e.g., DEBORAH L. RHODE & GEOFFREY C. HAZARD, JR., PROFESSIONAL RESPONSIBILITY AND REGULATION (2002) (noting that critics of bar exams claim that “the skills existing exams measure do not adequately predict performance as a lawyer” (at 223) and that the “inadequate link between exam and job performance is of special concern because minority applicants have disproportionately low passage rates” (at 224, quoting DEBORAH L. RHODE, IN THE INTERESTS OF JUSTICE: REFORMING THE LEGAL PROFESSION at 151 (2000)); Abel, Lawyer Self-regulation, supra note 3, at 115 (“As Weber noted, examinations became the dominant entry barrier in the twentieth century. These have an unproven – and arguably dubious – relationship to the knowledge lawyers actually utilise in their daily practice (in the language of psychologists: they have never been validated.”) (footnote omitted).
171. See, e.g., Curcio, A Better Bar, supra note 8, at 364–65 (urging reform to test additional skills required for law practice); Howarth & Wegner, Ringing Changes, supra note 8, at 430–31, 447–56.
approach of Langdell that focused on dissection of appellate decisions in a university setting. For this and other reasons, lawyering skills beyond core analytic skills are relatively recent additions to law school programs, and still peripheral at too many law schools. Legal education requires substantially less clinical experience than other professional schools, and nothing guarantees that law school graduates have ever seen a courthouse, a client, or a lawyer. In these circumstances, licensing tests that replicate the most traditional aspects of law school are not closely connected to legal practice.

II. LACK OF JOB ANALYSIS

Employers facing Title VII use job analyses to establish the validity of employment tests with disparate impacts. Licensing tests also rely on job analyses for validity: “The standard and most useful device for representing the construct of professional competence is a job or practice analysis.” Until very recently, job analysis research for bar exams has been almost non-existent. It is still very lacking.

The NCBE did a job analysis in 2012. Other than the addition of civil procedure to the subjects covered by the MBE, which may or may not have been in the works before that study, little in the exam appears to have changed in response to this research. The focus on testing memorized legal knowledge continues, although twenty-five skills were determined to be of

173. For explanations of legal education’s focus away from clinical lawyering skills, see Howarth & Wegner, Ringing Changes, supra note 8, at 428–31.
175. See supra text accompanying notes ; Guardians Ass’n of the N.Y.C. Police Dep’t., Inc. v. Civil Service Comm’n, 630 F.2d 79, 95–96 (2d Cir. 1980).
177. See STEVEN NETTLES & JAMES HELLRUNG (AMP), NAT’L CONF. OF BAR EXAMINERS, A STUDY OF THE NEWLY LICENSED LAWYER (2012). For discussion of this job analysis, see Susan Case, The NCBE Job Analysis: A Study of the Newly Licensed Lawyer, B. EXAM’R, Mar. 2013, at 52 [https://perma.cc/SDK4-92CH] (study relied on distributing surveys to more than 20,000 new admittees whose email addresses were provided by the National Conference of Bar Examiners. Only 1,669 responses (8.4%) were returned and usable). See NETTLES AND HELLRUNG, A STUDY OF THE NEWLY LICENSED LAWYER, supra note 18, at 9.
greater importance than the most important knowledge domain, Civil Procedure. The NCBE has recently undertaken a promising new practice analysis study using a different methodology than it used in 2012.

California is also undertaking a long-overdue job study. In her 2017 report on the California bar’s standard setting study, Dr. Tracy Montez of the California Department of Consumer Affairs, criticized the lack of a job study to provide the basis for California’s bar exam: “Given that a state-specific occupational analysis does not appear to have been conducted, it is critical to have this baseline for making high-stakes decisions.” At the same time, Professor Deborah Merritt made the same criticism: “California’s bar exam—like the exams in other states—has never been validated. This means that no job analysis or other scientific study links the exam’s content to the skills and knowledge needed by new attorneys.” California’s own 2017 Content Validation Study also identified the need for a job analysis. In response, California has recently begun a job analysis

181. Tracy A. Montez, Observations of the Standard Setting Study for the California Bar Examination 10 (Calif. Dept. of Consumer Affairs, July 2017), http://www.calbar.ca.gov/Portals/0/documents/admissions/Examinations/Tracy-Montez-ReviewBarExamsStudy.pdf [https://perma.cc/4SRB-W7NK]. Dr. Montez explained that such a study was needed for, among other purposes, “determining content to be measured on the [California Bar Exam]; creating a common frame of reference . . . when establishing passing scores; providing preparation and training information to candidates and schools.” Id.
182. Letter from Professor Deborah Merritt, John Deaver Drinko, Baker & Hostetler Chair in Law at the Ohio State Univ., Moritz College of Law, to California Supreme Court In re California Bar Exam (Oct. 1, 2017), available at https://static1.squarespace.com/static/559b2478e4b05d22b1c75b2d/t/5d644021181a0f70001180c43/1566851106501/2017.10.1+Merritt_Letter+to+Cal+Supreme+Ct.pdf [https://perma.cc/YGH6-2WPC]. In the same spate of bar exam research, California also conducted a content validation study in which ten lawyers from diverse backgrounds and length of practice evaluated components of the California Bar Exam using the NCBE’s 2012 practice analysis. See CHAD W. BUCHENDAHL, CONDUCTING A CONTENT VALIDATION STUDY FOR THE CALIFORNIA BAR EXAM: FINAL REPORT (Oct. 4, 2017), available at http://www.calbar.ca.gov/Portals/0/documents/admissions/Examinations/CBESStudy_Attachment_A.pdf [https://perma.cc/2TVY-T6VA] [hereinafter CAL. CONTENT VALIDATION STUDY 2017].
183. See BUCHENDAHL, CAL. CONTENT VALIDATION STUDY 2017, supra note 186. This study found that the components of the bar exam aligned with knowledge and skills identified in the 2012 study but also identified the need for a design process that used a new job analysis as the blueprint for the exam. Id.
study that will be based on surveys, focus groups, and task sampling in which attorneys will receive randomly timed prompts to identify the tasks they are engaged in at the time of the prompt.\textsuperscript{184}

The Institute for the Advancement of the American Legal System (“IAALS”) is also conducting ambitious research with Professor Deborah Merritt that should provide important insights about the meaning of minimum competence in law. This national project is using forty to sixty focus groups of both new lawyers and supervisors of new lawyers to determine the knowledge and skills used by the new lawyers and how those necessary knowledge and skills are obtained.\textsuperscript{185}

The NCBE, California State Bar, and IAALS job analyses will bring important insights about what minimum competence looks like. Those insights should serve as the blueprint for designing a bar exam or other licensing requirements, but they are not currently in place to validate bar exams. Our rituals of bar exams are well-settled, but the appropriate foundations to show the validity of the tests have been absent.

III. PROFESSIONAL DESIGN

Another aspect of Title VII validity is that the test is professionally designed.\textsuperscript{186} The multistate components (Multistate Bar Exam; Multistate Essay Exam; and Multistate Performance Test) created by the NCBE are professionally designed, one important argument for the Uniform Bar Exam.\textsuperscript{187} But state essays are typically written by accomplished lawyers without expertise in test design.\textsuperscript{188} In this important respect, many bar exams suffer from the same critique offered by the Fourth Circuit in 1976,

\textsuperscript{186} See, e.g., text accompanying notes \textsuperscript{ supra}, and Guardians Ass’n of the N.Y.C. Police Dep’t., Inc. v. Civil Service Comm’n, 630 F.2d 79, 96–97 (2d Cir. 1980).

\textsuperscript{187} See Judith A. Gundersen, MEE and MPT Test Development: A Walk-Through from First Draft to Administration, B. EXAM’R 29 (June 2015) (describing creation of essay and performance tests); Kane & Southwick, supra note 170 (describing creation of MBE questions).

that the bar exam questions were written and graded by “competent lawyers but laymen at question design and evaluation.”

IV. SCORING SYSTEMS THAT REFLECT PRACTICE COMPETENCE

Employers attempting to defend tests with disparate impact under Title VII also try to establish that their scoring systems reflect actual job performance. Richardson v. McFadden, discussed above, presented a dismal picture of bar exam scoring, with some graders using detailed rubrics but adding points at the end, while another graded on an overall impression. The court upheld those exam practices even after declaring that the chance of a “70” score being meaningful was close to zero.

Grading practices in many jurisdictions are much more professional today, but not everywhere. Grading details are often hidden. Some jurisdictions hold calibration sessions; some do not. Some jurisdictions have elaborate regrading processes for close cases; some do not. Some jurisdictions provide detailed sample grading rubrics or model answers; some do not.

Another crucial aspect of validity in scoring relates to establishing the cut score that determines passing or failing. Unlike virtually all other professions using a national multiple-choice licensing test to establish minimal competence, bar examiners set cut scores jurisdiction-by-jurisdiction, often without any process for setting that cut score. The disparity in cut scores itself, without any evidence that competence varies by jurisdiction, undermines the validity of bar exams. The questionable basis upon which cut scores are determined is especially problematic considering the data showing that higher cut scores exacerbate racial and ethnic disparities in bar passage results.

C. ALTERNATIVES

Even if validity of the test could be established, the final stage of disparate impact analysis under Title VII or professional responsibility licensing scrutiny asks whether valid alternatives that are less discriminatory exist. In the licensing context, this is the most important question, and the most promising. As Professor Deborah Merritt urges, “If the exam tests the wrong things, we have a professional obligation to change
Bar examiners wedded to conventional bar exams need to address the disparate impact and validity questions related to those exams, including the looming cut score problems, instead of continuing to rely on the effective impunity that came with immunity from Title VII. The future belongs to alternatives that assess minimal competence more effectively with less discriminatory impact. Several hopeful signs are worth describing.

I. NEW HAMPSHIRE’S DANIEL WEBSTER SCHOLAR PROGRAM.

Frustrated by the lack of competence of too many new lawyers, the New Hampshire Supreme Court and Committee of Bar Examiners took action and began an exciting collaboration with the University of New Hampshire School of Law. In the resulting Daniel Webster Honors Program, students undertake a rigorous curriculum of a range of core lawyering skills in their second and third years of law school, assessed by law professors, practitioners, bar examiners, and judges. Students who successfully complete the Daniel Webster program may be admitted to practice law in New Hampshire upon graduation from law school. An IAALS study of focus groups and a simulated client interview established that the Daniel Webster graduates were evaluated more highly than other new lawyers and that Daniel Webster law students out-performed new lawyers on a standardized client interview. That a two-year program would have greater validity than a two-day paper and pencil test is not surprising.

The IAALS study also established that participation in the Daniel Webster program was the only significant predictor of successful performance of the standardized client interview, and that neither LSAT nor law school class rank was a significant predictor. This study of a single, albeit crucial, lawyering skill is suggestive. The greater significance of an academic lawyering program than either LSAT or law school grades

197. Merritt, supra note 173, at 11.12
202. Id.
suggests that testing a broader range of competencies may improve validity and reduce the persistent racial disparities of bar exams, which suffers from disparities endemic to standardized tests, including the LSAT. The active involvement of the bench and the bar in the Daniel Webster Scholars Program, from the original instigation to the ongoing evaluation of student performance, is an excellent example of the public benefit from professional responsibility licensing scrutiny in action.

II. CANADA’S PRACTICE READINESS EDUCATION PROGRAM.

The articling system in Canada by which law graduates must obtain law practice experience creates significant problems of unequal access to the profession, as have similar systems in other countries. But a newer aspect of licensure in Alberta, Manitoba, Nova Scotia, and Saskatchewan may suggest a more valid and less discriminatory future for attorney licensing in the United States. Each of those provinces now requires, instead of a traditional bar exam, a nine-month, part-time Practice Readiness Education Program (“PREP”) undertaken during the law graduates’ period of articling and offered by the Canadian Centre for Professional Legal Education (“CPRED”), a non-profit consortium led by representatives of the four provincial law societies. PREP is a hybrid of in-person workshops and online modules that focus on “practical legal knowledge” and “competencies in lawyer skills, practice management, professional ethics, as well as the personal attributes needed to successfully practice law in Canada.” A consortium of U.S. jurisdictions could offer a similar program during the weeks following law school graduation currently spent in bar review courses. Rather than pay for bar review classes, participants could pay for classes teaching competencies that are clearly important to clients. Passing those classes would replace additional licensing testing.

204. See, e.g., Peggy Maisel, The Education and Licensing of Attorneys and Advocates in South Africa, 79 BAR EXAM’R 15, 21 (May 2010) (“Since it is the candidate attorney’s responsibility to find the law firm or lawyer for articles, the practical effect of this requirement has been to make it more difficult for nonwhite law graduates to obtain admission as attorneys.”).

207. See Practice Readiness Education Program (PREP) Fact Sheet, supra note 209.
III. NCBE’S TESTING TASK FORCE

Another reason for optimism about the future of bar exams in the United States is the NCBE’s Testing Task Force, a three-year project started in 2018 that is designed to “ensure that the bar examination continues to test the knowledge, skills, and abilities required for competent entry-level legal practice in a changing profession.”\footnote{About, NCBE Testing Task Force, https://testingtaskforce.org/about/ [https://perma.cc/KBMS-NAVE] (last visited Dec. 26, 2019).} The first phase of the project was a series of “stakeholder listening sessions” intended to “solicit input from various stakeholder groups about characteristics and considerations for the next generation of the bar examination.”\footnote{NCBE Testing Task Force, Testing Task Force Phase 1 Listening Sessions Executive Summary in YOUR VOICE: STAKEHOLDER THOUGHTS ON THE BAR EXAM, at 1 (2019), available at https://www.testingtaskforce.org/wp-content/uploads/2019/08/FINAL-Listening-Session-Executive-Summary-with-Appendices-1.pdf [https://perma.cc/G2PJ-JQ9N].} Key findings include many that are consistent with professional responsibility licensing scrutiny, such as “[e]nsuring that the bar examination is free from racial/ethnic/gender bias is a priority”\footnote{Id. at 5. This priority is framed as scrutiny of any changes, suggesting complacency about current bar exam practices.} and “[l]awyering skills should be emphasized over subject matter knowledge.”\footnote{Id. at 3.}

IV. FURTHER ALTERNATIVES

Possibilities abound for rethinking attorney licensing to bring it closer to the competence actually required in today’s practice of law.\footnote{See, e.g., Howarth supra note 8, at 397.} Competencies that should be considered for testing include advanced subject matter, advanced thinking (including evaluation and strategizing), metacognition and reflection, focused in-depth inquiry in areas of expertise (specialization), and additional practice skills, such as fact-gathering or interviewing.\footnote{Id. at 448–56.} Potential test design changes include open-book tests to more closely approximate practice; reframing multiple-choice questions, such as those based on “case files” that could assess research skills and case theories; simulations and portfolios; and component-based testing.\footnote{Id. at 456–61.} Technology and advances in artificial intelligence permit testing methods
that would have been impossible just a few years ago.\textsuperscript{215} Our professional responsibilities related to public protection, competence, and nondiscrimination demand that we take advantage of these new possibilities to improve the validity of attorney licensing.

CONCLUSION

Borrowing the framework of Title VII disparate impact scrutiny provides a practical, feasible approach to ensuring that licensing tests are not wrongfully excluding people of color from the legal profession. But eliminating bias in the profession is largely a matter of will, not feasibility. Professional responsibility licensing scrutiny holds members of the profession, bar examiners, and state supreme courts to the values and goals we already claim as a profession. But principles of professional responsibility and legal ethics may be self-serving window dressing,\textsuperscript{216} not even truly aspirational, let alone enforceable without careful scrutiny and concrete action. Do we aspire to be a nondiscriminatory and inclusive profession dedicated to public protection and grounded in competence? Do we agree that the disparate impact of bar exams is a sufficiently serious problem to justify careful scrutiny regarding validity and less discriminatory alternatives? Or do we prefer to rely on our own good faith?

From today’s perspective, the \textit{Vickery, Parrish, Richardson, \& Woodard} cases reveal lawyers dedicated to maintaining a racially restrictive profession through discriminatory bar exam practices. Those bar examiners prevailed with arguments that they were operating fairly and in good faith to protect the public by ensuring the competence of new lawyers.

\textsuperscript{216} “Although professions portray self-regulation as a means of reducing client uncertainty, they deliberately draft ethical rules in vague and ambiguous language to preserve the indeterminacy that is a foundation of professional power.” \textit{ABEL, supra} note 1, at 38 (footnote omitted).
success has delayed for generations meaningful oversight of persistent racial disparities in passing rates for bar exams that suffer from unestablished validity. This is a problem with a solution. Decades of Title VII experience has created a simple, workable framework that can be used to determine whether the disparate impact of bar exams can be defended based on the validity of the exams, or whether less discriminatory alternatives should be substituted. Principles of professional responsibility and legal ethics justify this long-neglected oversight. Acceptance or rejection of this professional responsibility licensing scrutiny is itself a high-stakes test for our profession. **We have the tools to pass this test, but only if we have the will to use them.**
